Green AED Directional Sign

Sturdy and rugged hardshell carry case is waterproof and dustproof. IP67 certified for challenging environments.

Outdoor AED Carry Case

Essential supplies to prepare a patient for AED use and allow rapid response to a cardiac arrest.

First Responders Kit

BEATY

REAL TIME CPR HELPER

In cases of sudden cardiac arrest, time is a crucial factor as immediate response can dramatically increase chance of survival and outcomes among sufferers. As bystanders are usually the first to encounter someone suffering a cardiac arrest, worldwide efforts are invested in educating and training the general population for early response and quality CPR.

BEATY was developed to help bystanders and people without medical knowledge in performing CPR. The feedback provided by the device allows for real time adjustments of the applied force during chest compressions, to the recommended force that will effectively compress the sufferer's heart and provide sufficient blood flow to the brain and other vital organs. This increases the chance of survival for sufferers, as well as the capability of rescuers.

Simple

As medical emergencies are very stressful, even simple tasks such as turning ON a device may be challenging, with BEATY, you simply place the Beaty on the chest of the SCA sufferer and start compressing.

Compact

BEATY is small and easy to store or keep on your person so if emergency strikes, it is always in reach.

Accessible

Medical devices don't have to look intimidating - an innovative and sleek design makes BEATY easy to carry and use.

Economical

BEATY is as affordable as a few cups of coffee.
